IVF is now established worldwide as a clinical service. Units are striving to improve their success rates, and many treatments are being advocated as 'yet another breakthrough'. The purpose of this book is to help clinicians to evaluate each of these new treatments. Each chapter is written by a recognized international expert in the field and the chapters are short and succinct, summarizing the latest evidence-based information for each topic and treatment. Sections cover patient selection and preparation, the role of AIH before IVF, stimulation, monitoring, laboratory techniques, embryo transfer, ancillary treatments and assessment of results.
