This groundbreaking core text fills a void in nursing literature by integrating psychotherapy, psychopharmacology, and complementary and alternative medicine (CAM) approaches into advanced practice nursing. It is organized around psychiatric "syndromes" rather than DSM diagnoses, so it will remain current even after the publication of the DSM-5. The book provides clear and relevant treatment options in the form of decision trees with additional explanatory narratives. These decision trees enable practitioners to distinguish "normal" patients from those who require more customized therapeutic interventions. This holistic text integrates neurobiology, theory, and research evidence related to psychotherapy, psychopharmacology, and complementary and alternative medicine interventions. While providing comprehensive information on theory and practice, it simplifies complex aspects of treatment with clarity and provides the depth of content appropriate to support sound clinical reasoning required in advanced practice.
