The text goes beyond the emotional and behavioral aspects of each disorder and views the broader impacts of the symptoms. This approach emphasizes the importance of looking at the other functional impacts of these manifestations (e.g., cognitive deficits secondary to depression, orthopaedic ambulation issues).

The emphasis on neuropsychological sequelae, physiological basis, and means of diagnosing and treating of 300 conditions across the lifespan make this the most comprehensive resource available to professionals in and around neuropsychology, neuropsychiatry and the behavioral neurosciences.

Publication Year: 2011
Edition: 1
Author/Editor: Noggle, Chad; Dean, Raymond; Horton, Arthur MacNeill, Jr.
