Multiple sclerosis is the most common neurological cause of debilitation in young people; it affects approximately 85,000 people in the UK, 400,000 people in the US and approximately 2.5 million people worldwide. The disease commonly manifests in the second or third decade of life, and in most cases it leads to progressive disability, which explains its enormous impact on the economy (estimated at around GBP1.4 billion annually). The disease is incurable and the precise causes are still unknown.

This practical pocketbook summarises the latest understanding of what might cause the disease, the methods of diagnosis and assessment, and current management techniques. The book also includes chapters on variants of multiple sclerosis, on childhood-onset disease and future therapies. This pocketbook will serve as an invaluable reference for trainee neurologists, consultants needing rapid access to core facts, interested general practitioners and specialist MS nurses.

Edition: 1st
Author/Editor: Scolding, Neil; Wilkins, Alaistair
Publisher: Oxford University Press (OUP)
ISBN: 978-0-199-60325-1
Platform: Ovid
Product Type: Book
Speciality: Neurology
Language: English
Pages: 96
Illustrations: 0
