This highly practical book is the only guide needed to the procedures and techniques commonly used in anesthesia and critical care medicine. Step-by-step, it clearly explains each technique and procedure, enabling the reader to fully understand how and why they are performed. Full colour photographs illustrate each technique, and every chapter covers the same essential information: definition, indications, contraindications, complications, equipment, sites, and technique, for ease of use.

This book will be used by all junior trainees in anesthesia, along with junior doctors from other specialties working in intensive care units. It will also be useful to any senior anesthetist who wishes to update or refresh their knowledge, as well as anyone working in the emergency ward who performs any of these procedures.
