Hemostasis and Thrombosis in Obstetrics & Gynecology provides specialists from both disciplines with the information necessary to manage their patients effectively.

A hemostatic change in women through their reproductive lifetime is emerging as an issue of global importance. No wonder, as obstetric hemorrhage remains a major cause of maternal mortality in both developed and developing countries. Thrombophilias and pulmonary embolisms are a threat to maternal and fetal well-being.

Hemostasis and Thrombosis in Obstetrics & Gynecology provides a framework for assessing and managing hemostatic disorders in women. Written by an international team, it provides globally applicable guidelines for obstetric hematology.

Publication Year: 2011
Edition: 1st
