Theories of Counseling and Psychotherapy: Individual and Relational Approaches

A unique and useful overview of important approaches to counseling and psychotherapy by an expert author and educator. Focusing on contemporary approaches and practical applications, it is a must-have for students and clinicians alike.

This innovative new text presents a comprehensive review of major theories of counseling and psychotherapy using four paradigms: organic-medical, psychological, systemic/relational, and social constructivist. Designed to be accessible and relevant to practice, the book reinforces learning with the inclusion of objectives, chapter summaries, applications of each theory in practice, and brief biographies of major theorists.

The text moves beyond traditional approaches with expansive coverage of relationship-centered and postmodern theories such as Dialectic Behavior Therapy, Emotion Focused Therapy, Solution-Focused Brief Therapy, Narrative Therapy, and others. Each theory is explored in depth in a student-mentor dialogue that examines and debates the challenges that arise with each theory. The book also addresses the counseling role in psychiatric case management, reflecting the growing reality of cross-professional collaboration.

Practical yet rigorous, the text is a state-of-the-art introduction to contemporary approaches in counseling and psychotherapy for students in counseling, social work, professional psychology, marriage and family therapy, and related professions.
