Master Techniques in Orthopaedic Surgery: Fractures

Completely updated for its Third Edition, Fractures, the acclaimed Master Techniques in Orthopaedic Surgery volume presents the most advanced, successful surgical techniques for fractures of the upper extremity, lower extremity, pelvis, and acetabulum.

The world's foremost surgeons describe their preferred techniques in step-by-step detail, explain the indications and contraindications, identify pitfalls and potential complications, and offer pearls and tips for improving results.

This edition includes ten new chapters – total elbow arthroplasty, revised shoulder arthroplasty, proximal humerus hemiarthroplasty, extra articular proximal tibial fractures, submuscularis locked plating, subtrochanteric femur fractures, ankle fractures, calcaneal fractures, tibial pilon fractures, and staged ORIF. Seventeen chapters have been rewritten by new contributing authors and leaders in their field.
