This easy-to-read outline review follows the unique two-column Straight A's format that lets students choose how they study for NCLEX® and course exams.

The interior column in this second edition outlines key facts for in-depth review; the exterior column lists only the most crucial points for quickest review. Other features include NCLEX®-style questions at the beginning and end of each chapter; lists of top items to study before a test; Time-Out for Teaching patient-teaching points; Go with the Flow algorithms; and critical information highlighted in a second color.
