This book is rigorously practical and is the guide that every physician including all rheumatologists, and gastroenterologists and dermatologists who treat patients with this class of drugs, will want to have on hand to answer their questions that arise every day.

Tumor Necrosis Factor (TNF) blocking therapy has recently been introduced as an important new class of biologic therapy for rheumatoid arthritis, ankylosing spondylitis, Crohn’s disease, psoriasis and psoriatic arthritis. This class of drugs, currently comprised of three different agents, is being increasingly used for these around the world. Intensive clinical research is also defining new areas in which these drugs will be used in the future. These new indications for TNF-blocking therapy will increase the number of physicians using this class of drug.

Much of the literature currently available has come from the clinical trial setting with an academic emphasis. This guide provides a comprehensive distillation of the clinical experience with these drugs combined with the diverse available databases to provide practical information about the use of these drugs in daily practice.
