As part of the Emergencies in... series, this book is a practical, accessible guide to all emergency situations encountered in palliative care.

Emergencies in Palliative and Supportive Care will provide clinical guidance for the management of people with progressive life-limiting illnesses including cancer, AIDS, end-stage organ failure and neurodegenerative diseases.

Features:
* An invaluable aid at the bedside
* Outlines the essential investigations for diagnosis
* Advocates a symptom control approach to treatment
* The clinical responses are tailored to the changes in the patient’s illness
