n Children with Complex Medical Issues in Schools, Dr. Castillo bridges the
gap between research and practice and provides a concise, yet thorough
reference that covers a broad range of conditions, from high incidence
disorders like epilepsy and meningitis, to those with less obvious
neurological underpinnings like asthma and diabetes.

Increasingly, children with significant medical issues are being incorporated into
the general school environment. Given the potential effects of various disorders
and conditions on educational prognosis, it is important for neuropsychologists,
pediatric psychologists, school psychologists, teachers, and other professionals
who are working with these children to be aware of the nature and course of these
many disorders as well as the avenues for rehabilitation, accommodation, and
classroom modification.

Each chapter in this text is written by clinicians with practical expertise with each
disorder and includes:
* Case studies with results from neuropsychological evaluations to elicit
  understanding into how a student’s school functioning may be affected by their
  medical history
* Recommendations for educational modifications and accommodations
* Data regarding morbidity and mortality rates, related medical issues, and
  common medical treatments
* Interventions for children with specific medical disorders, along with
  educational resources that may be accessed via the internet or through other
  literature
