Feline Infectious Diseases: Self-Assessment Colour Review

This new addition to the Veterinary Self-Assessment Colour Review series covers all types of feline infectious diseases.

The review includes infections caused by viruses, bacteria, parasites and fungi. The 199 clinical cases are presented randomly, as in practice, but the wide range of cases cover infectious diseases which affect all the organ systems of the cat.

The illustrated clinical cases contain integrated questions and detailed explanatory answers. The book will appeal to professionals in practice and in universities, and to veterinary students, veterinary nurses and technicians.

Key features include:
