Topics in Arrhythmias and Ischemic Heart Disease provides expert reviews and assessment of the most recent clinical research and on current trends in evaluation, diagnosis, and clinical management.

In order to provide the latest and most sophisticated treatment the cardiology clinician must have current knowledge of a vast amount of translational research in the pathophysiology of these disorders as well as be aware of recent advances and issues in pharmacogenic and interventional therapies.

Reviews include assessment of emerging data and indications of likely key advances with significant impact on clinical research in the near future. This volume is a must-have for every cardiologist needing to be fully current on recent advances in ischemic heart disease and arrhythmic disorders.

About the Series:
Developed by expert faculty at the Cornell Division of Cardiology, the Emerging Concepts in Cardiology series edited by Craig T. Basson and Bruce B. Lerman, provides "state of the art reviews" of each topic from a clinical perspective, with expert perspectives in current clinical research and emerging basic and traditional research issues all in a concise, attractive and well-illustrated texts.
