Hepatic Fibrosis

A valuable guide for physicians and basic researchers to prevent and treat hepatic fibrosis and cirrhosis, especially at the early stage of the diseases.

With contributions from 16 Chinese hepatologists, this book highlights important advances in worldwide hepatic fibrosis researches in recent years, and covers from pathogenesis of hepatic fibrosis, etiology, pathology, molecular biology, biomarkers, clinical features, diagnosis, pharmacology, to treatment and prevention of hepatic fibrosis, including the use of integrative traditional Chinese medicine and western medicine therapies. The contents are comprehensive, novel, and provide a complete understanding of hepatic fibrosis.
