Year in Lipid Disorders, The: Volume 2

Provides up-to-date insight into the latest research into lipid disorders, and the implications of this research for daily clinical practice.

Lipid disorders are among the primary risk factors in developing atherosclerosis and heart disease.

Geared to general physicians, cardiologists, diabetologists, nephrologists, and doctors in training, this volume includes an overview of the latest developments in this complex field by reviewing the most significant papers published in the medical journals on lipid disorders over the last eighteen months.
