Embase Weekly Alert

This rolling 8-week online database contains roughly 2,000 new records and consists of bibliographic citations and abstracts from over 5,000 international biomedical journals covered in Embase.

About 80% of the records in Embase Alert include the complete English-language author abstracts, and many records contain the authors’ keywords. The records found in Embase Alert appear within 5 days upon receipt of the original journal as fully indexed, high value-added Embase records.

Like the retrospective Embase files, Embase Alert emphasizes drugs and pharmacology, pharmacy, pharmacoconomics, toxicology, human medicine, biological sciences relevant to human medicine, psychiatry, public, occupational and environmental health, health policy and management, substance dependence and abuse, forensic science and biomedical engineering and instrumentation.
