To successfully perform critical functions such as pharmacovigilance, generating high-quality systematic reviews in support of evidence-based medicine and drug and medical device efficacy studies, pharmaceutical and life sciences organizations require a wide array of biomedical evidence.

Embase increases the discovery of biomedical evidence to support critical life sciences functions, delivering relevant, up-to-date biomedical information to the global biomedical research community.

Key features:
- Over 30 million abstracts and indices from more than 8,500 published, peer-reviewed journals, as well as in-press publications and conferences
- More than 6 million records and indexes 2,900 journals NOT covered in MEDLINE
- Full-text indexing of drug, disease and medical device data, supported by the precise Emtree thesaurus

Broad biomedical scope covering the following areas:
- Drug therapy and pharmacovigilance
- Clinical and experimental (human) medicine
- Basic biological science relevant to human medicine
- Biotechnology and biomedical engineering, including medical devices
- Health policy and management, including pharmacoconomics
- Public, occupational and environmental health, including pollution control
- Veterinary science, dentistry, and nursing
- Psychiatry and mental health, including substance dependence and abuse
- Forensic science
- Alternative and complementary medicine
