## Geriatric Orthopaedic Surgery & Rehabilitation

Rely on Ovid as the trusted solution that transforms research into results

Here's a quarterly peer-reviewed journal that provides clinical information concerning musculoskeletal conditions affecting the aging population.

Because it is becoming increasingly important to keep older adults functional and independent, the journal focuses on care of geriatric orthopaedic patients and their subsequent rehabilitation. Primary readership includes orthopaedic surgeons and anesthesiologists, geriatricians, and other physicians. An international forum, GOS welcomes research reports and reviews as well as technical perspectives, case studies, and other evidence-based articles from around the world.
