## Evidence-Based Practice

Rely on Ovid as the trusted solution that transforms research into results

Evidence-Based Practice is a quarterly journal focused on topics relevant to the daily practice of family medicine.

Each issue contains content addressing timely and pertinent questions related to patient care. Questions are phrased in a concise, clinically useful format and answers are provided with thorough research of the best available evidence. Evidence-Based Practice is created by primary care clinicians without industry support and its subscribers are part of a rapidly growing international community of physicians dedicated to continuing medical education and the concept of an evidence-based approach to family medicine by translating research into practice.
