For over 30 years, this journal has been at the interface of the science of information and the art of nursing, publishing articles on the latest developments in nursing informatics, research, and educational technology.

It connects you with colleagues as they share knowledge on implementation of electronic health records systems, design decision-support systems, incorporate evidence-based healthcare in practice, explore point-of-care computing in practice and education, and conceptually integrate nursing languages and standard data sets. Continuing education contact hours are available in every issue.
